DigitalBank Vault ® Encryption
Defensive Anti Interception Cyber Technologies

Unbreakable Encryption Solutions for protecting your critical communication and classified databases

The DigitalBank Vault quantum-safe symmetric One Time Pad Keyless Encryption is used for transmitting and storing highly sensitive classified information.

No Encryption Keys Stored Anywhere. Anytime.

No Encryption Keys ever exchanged or transmitted.

DigitalBank Vault® provides sophisticated Digital Anti Surveillance & Anti Interception technologies: military-grade encryption systems for ultra-secure anonymous communication (voice, video & text messaging) with untraceable file transfers & storage solutions

Block Interception Tapping & Surveillance on Your Organization

No Voice, Video, or Text Messages can be ever intercepted, read, listened to or recorded, because the communication system is One Time Pad, end to end encrypted and 100% Peer to Peer, without any third-party server's encryption involvement.

Nothing can be ever extracted

The DigitalBank Vault Encryption System does not store permanently and has no way to store data, information, keys, passwords, or any other form of memory.

No useful information can be ever retrieved, no matter what forensic tools are used.

Nothing Stored-Nothing to Hack

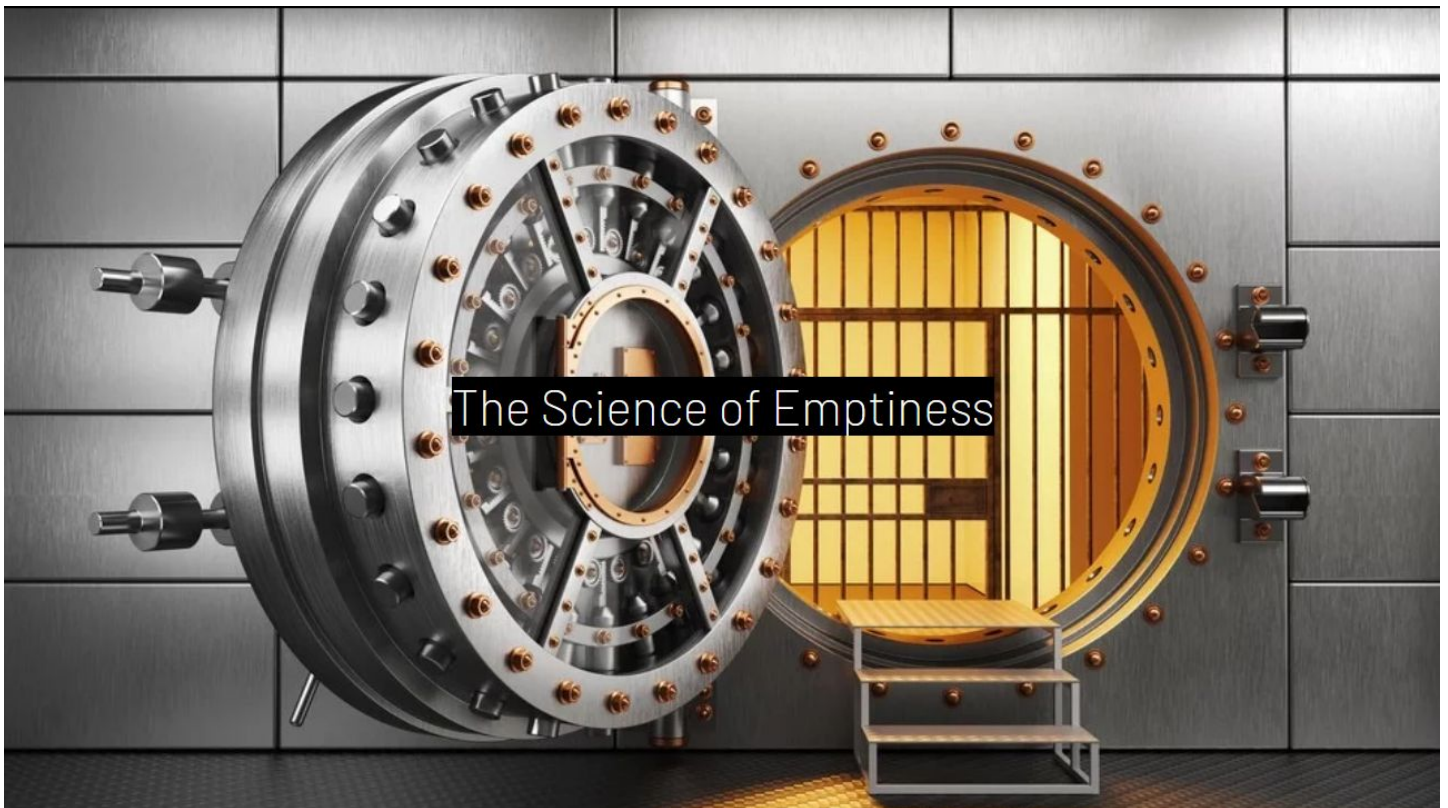

DigitalBank Vault protects users from all types of data breaches and withstands any online or offline hacking attacks for one simple reason, it does not store or share any encryption keys, data, information, or related files.

Protect your organization with the Impenetrable Keyless &
Serverless Encryption of DigitalBank Vault ®

Empty data storage systems without encryption keys or
backdoors are the ultimate solution to stop
forever hacking attacks.

No Storage. No Encryption Keys. Nothing to Hack

Encounter the next era in cybersecurity

“Breaking into an Empty Bank Vault”

DigitalBank Vault ® Products

1. The DBV Encryption System: One Time Pad Keyless Encryption Tech to be installed as an application on all Android phones, Apple iPhones, Android Tablets, Ipads, Windows PC and Laptops, Mac iOS Computers.

The DigitalBank One Time Pad Encryption Technology is working on any platform, any device or system, and supporting all languages.

Customized Set of Encryption Algorithms for each individual client

Share the quantum-safe encrypted content on all platforms you are currently using for your online communications even apps such as Whatsapp, Telegram, Skype, Facebook Messenger, SMS, and more.

Store securely your ultra-encrypted data on any cloud storage services such as Google Drive, Amazon, DropboxStore Uncrackable encrypted files on your devices, computers, servers.

\$ 5000 USD / month : 20 licenses included

2. The DBV Mobile Encryption Device: Smartphone Looking Device, working on a proprietary OS for Untraceable Anonymous Encrypted Voice and Video Messaging, Undecipherable Text Messaging Chat, Ultra Secure File Transfer and Storage, Immune to Digital Forensic Analysis.

Go Dark. Use Anywhere. Leave No Trace

If your device is stolen, seized or lost, no data can be retrieved by any forensic means because the encryption system and device's memory does not store any data, files, communications logs, keys , etc.

Block Forever Interception, Surveillance & Eavesdropping

Absolute Immunity to Spyware & Malware of any type

Serverless P2P Encryption

Individual Set of Encryption Algorithms for each client

All data and metadata is encrypted on the device and is not stored on any servers, anywhere.

The DigitalBank Vault Mobile Device does not store permanently and has no way to store encryption keys or any other form of memory.

\$ 8000 USD /month per device

3. The DBV Laptop Encryption Machine: for office use.

No Files, Documents, Video, Voice & Text Messages can be ever intercepted, read, listened to or recorded, because the communication system is end to end encrypted with a one time key, and 100% Peer to Peer, without any third-party server's involvement.

No useful information can be ever retrieved, no matter what forensic tools are used. What can be extracted is fragmented, randomly encrypted useless data.

DigitalBank Vault is a Bank Vault for Digital Assets:
an ultra-secure encryption technology that enables 100% privacy over communication:

protects sensitive and confidential information with top-grade end-to-end one-time pad keyless encryption on an impenetrable platform that includes video, voice and text messages, and secure encrypted & decentralized file transfers and storage systems

We developed our own One Time Pad Keyless Encryption technology and this is what makes the stealing of information from the DigitalBank Vault virtually impossible and guarantees the privacy of your communication.

Nothing can be ever extracted from this device

Absolute Immunity to Spyware & Malware of any type
Individual Set of Encryption Algorithms for each client

\$ 10,000 USD /month per device

Terms and Conditions:

Upfront Payment

60 Days Delivery

24/7 Online Support & Maintenance

Full Online Setup, Deployment & Training

Full Unlimited Warranty

Subscription Packages: 90 /180/ 360 days

Ongoing Upgrades Deliver (New features, New Devices)

Tailored features based on customer requirements
