PERFECT SECRECY: Resist any attacks of unlimited resources.

ANONYMOUS : no registration or login on any platform. No authentication needed.

OFFLINE: Air Gapped. Immune to remote hacking and espionage, ransomware, malware, data breach, surveillance.

SERVERLESS: Independent System with no servers or third party services involvement.

KEYLESS: Random Encryption Keys generated by the user only, for a few milliseconds, then erased permanently for the system, not stored anywhere and never exchanged, therefore they cannot be intercepted or hacked. Immune to Forensic Digital Analysis.

QUANTUM SAFE OTP : One Time Pad Cipher. The User can create an infinite number of symmetric keys with just a 'passphrase' each key generated is in the length up to one-time-pad, that is mathematically uncrackable.Unlimited number of keys. *FOREVER SECURE.*

SUPERENCRYPTION: DBV Tech 4 Layers of Symmetric Encryption OTP, AES 256, Blowfish 448 + NoFish 448. SuperEncryption that is Unbreakable and Indecipherable, no matter how much computational power you will apply."Above Government" level of encryption. Encrypted Files convey zero info about original content.

ABSOLUTE SECRECY: Impenetrable Personal, Unique, SuperEncrypted System for each client, coming with a dedicated set of encryption algorithms, so that each client can create his individual communication network and encrypted databases.

MULTI SIGNATURE- MULTI LAYER ENCRYPTION: one or more users can encrypt/decrypt one file together. Security Layered Access.

UNTRACEABLE ONLINE FILES TRANSFER: Private communication online network , anonymous, peer to peer, SuperEncrypted, for transferring encrypted files between two remote devices, without leaving digital trails. More Secure than any 'face to face meeting".

ENCRYPTION MACHINES : Encryption devices (hardware) available, fully air gapped, with 'tabula rasa' total erasing tech.

It's Like Breaking Into an Empty Bank Vault
